Interim Report

Your Project Title Goes Here

Name: Your Name Goes Here

ID Number: Your ID Number Goes Here

Date: Saturday, 24 June 2023

First Supervisor: Your Supervisor's Name Goes Here

Second Supervisor: Your Second Marker's Name Goes Here

Declaration

Module: FC6P01

Deadline: 02/06/2022

Module Leader: Prof. Ruvan Abeysekara

Student ID:

PLAGIARISM

You are reminded that there exist regulations concerning plagiarism. Extracts from these regulations are printed below. Please sign below to say that you have read and understand these extracts:

(Signature :) _____ Date:

This header sheet should be attached to the work you submit. No work will be accepted without it.

Extracts from University *Regulations* on Cheating, Plagiarism and Collusion

Section 2.3: "The following broad types of offence can be identified and are provided as indicative examples..."

- (i) Cheating: including taking unauthorised material into an examination; consulting unauthorised material outside the examination hall during the examination; obtaining an unseen examination paper in advance of the examination; copying from another examinee; using an unauthorised calculator during the examination or storing unauthorised material in the memory of a programmable calculator which is taken into the examination; copying coursework.
- (ii) Falsifying data in experimental results.
- (iii) Personation, where a substitute takes an examination or test on behalf of the candidate. Both candidate and substitute may be guilty of an offence under these Regulations.
- (iv) Bribery or attempted bribery of a person thought to have some influence on the candidate's assessment.
- (v) Collusion to present joint work as the work solely of one individual.
- (vi) Plagiarism, where the work or ideas of another are presented as the candidate's own.
- (vii) Other conduct calculated to secure an advantage on assessment.
- (viii) Assisting in any of the above.

Some notes on what this means for students:

1. Copying another student's work is an offence, whether from a copy on paper or from a computer file, and in whatever form the intellectual property being copied takes, including text, mathematical notation and computer programs.
2. Taking extracts from published sources *without attribution* is an offence. To quote ideas, sometimes using extracts, is generally to be encouraged. Quoting ideas is achieved by stating an author's argument and attributing it, perhaps by quoting, immediately in the text, his or her name and year of publication, e.g. " $E = mc^2$ (Einstein 1905)". A *references* section at the end of your work should then list all such references in alphabetical order of authors' surnames. (There are variations on this referencing system which your tutors may prefer you to use.) If you wish to quote a paragraph or so from published work then indent the quotation on both left and right margins, using an italic font where practicable, and introduce the quotation with an attribution.

Submission Information for Students

- Submit as a PDF file.
- Submit **BOTH** the Formal and Second submissions
- The report is a formal document and should be written in formal English
- Write for someone who is technically proficient but not necessarily familiar with your particular project
- Do not use 'possessive words' such as I, me, my, we... in reports
- Your report should cover everything as detailed in this template. You should delete the guidance notes before submission

Abstract

You can also call this the Summary if you wish.

Although it appears first, it is probably the last section to be written. By reading just the abstract, the reader should get a good sense of what the report says but in about half a page.

This document contains fields. To update the fields, select all (CNTL+A), then press F9. Word will ask if you wish to update the whole table of contents or just the page numbers- select whole table.

Finally, don't forget to delete all my hints in italics before submission

Contents

Declaration.....	1
Submission Information for Students	2
Abstract.....	3
Contents	4
1. Introduction.....	5
1.1 Subheadings should be ‘heading 2’ style and numbered as here	5
2. Background.....	6
3. Work Completed.....	7
4. Further Work.....	8
5. Progress Review.....	9
6. References.....	10
7. Bibliography	11

1. Introduction

This section introduces both the subject of the report- that is the project you are doing and writing about in this report- and the structure of the remainder of the report.

Staff will look for:

Clarity with which the subject is introduced

Does this correspond with what was agreed?

How well you have introduced the structure

1.1 Subheadings should be ‘heading 2’ style and numbered as here

To include subheadings in the table of contents, the last thing you need to do is select all (CNTL+A) and update fields F9. If you don't need this subheading, delete it.

2. Background

In order to convince the reader that any conclusions drawn and recommendations made at the end of the final report are valid, you need to show that you have a good understanding of the area in which you are working and are fully aware of any other working that has been done in related fields. You do that by presenting a summary of that work in this section. You do not need to copy out great chunks of other's work, or spend a long time in reviewing this. This is the section where references will be most plentifully employed, both to demonstrate the level of reading you have undertaken and to save space. Rather than setting out other's work in detail in this section, you can summarise it briefly, and include a reference to the original which the reader can look at if necessary.

Staff will look for:

How efficiently you have presented the information, using references rather than writing out lots of text.

Quality of background work presented

Completeness of coverage

Level of understanding displayed

Level of consideration of any wider contextual issues

3. Work Completed

The title of this and subsequent sections can be changed if you wish, to something more appropriate. This section should focus on the work you have already completed towards your project. Remember this should show a logical and structured approach to producing what you can argue is the best solution to the problem specified.

Staff will look for:

Logical flow to work presented

Rigorous and formally correct approach to the work

Presentation matches with work done as seen in supervision meetings

4. Further Work

This section should detail the work you still have to do.

Staff will look for:

Full and realistic presentation of work still to do

Evidence of thought given to amount of work remaining

Reference to project plan and revision of project plan if required

*A level of confidence that you will be able to complete the project on time
based on what is presented*

5. Progress Review

This section is probably the most important in the interim report. You review what you have done so far and what you still have to do, and make an honest assessment of whether you are on target to finish by the end of the project. You should also review your project plan and see if that's still correct, updating it if not.

*If you are on target, or ahead of schedule, this is good. **If you are behind**, you need to analyse why you are behind, and most importantly what you are going to do to get yourself back on target. In this section you will not lose marks for saying you are behind, or that there are problems, but you will lose marks if you present an inaccurate review saying everything's fine, when it evidently is not.*

Staff will look for:

A realistic assessment of your current position compared to your project plan

A sensible revision of your plan if you are behind schedule

An explanation of why you are behind if this is the case

6. References

Cited references only in this section. Use either Harvard or IEEE referencing and be consistent.

7. Bibliography

Other sources but not cited in the text
